

Dmitrii Kovanikov

Senior Software Engineer

London, UK | chshersh@gmail.com | chshersh.com | linkedin.com/in/chshersh | github.com/chshersh

Experience

Bloomberg C++, OCaml, Python, TypeScript, Kafka, SQL
Senior Software Engineer

May 2023 — Present
London, UK

- Built and optimized high-throughput market data feed handlers for 40+ European exchanges (including Xetra and Eurex) and cryptocurrency venues; processed 1B+ daily messages across TCP/UDP multicast feeds and binary, JSON, XML, and CSV market data protocols.
- Led the implementation of the EMDI refresh/recovery protocol for Xetra multicast feeds in modern C++; engineered deterministic state management for packet loss recovery, duplicate suppression, sequencing, and snapshot synchronization in latency-sensitive distributed systems.
- Drove engineering excellence across a 150+ engineer department by designing and teaching advanced C++23 and Functional Programming courses; introduced modern C++ best practices around resource management, compile-time programming, performance analysis, and maintainable systems design.

Feeld Haskell, CoffeeScript, Python, MongoDB, RabbitMQ, PostgreSQL, GCP
Senior Software Engineer

Apr 2022 — Apr 2023
London, UK

- Architecting & engineering a scalable backend for a popular dating app.
- Fixed multi-year problems for paid users which increased the company's revenue and helped the CX team be more efficient.
- Created an error-monitoring dashboard using MongoDB, PostgreSQL, BigQuery, and Excel which helped drive product development priorities.
- Implemented rate-limiting component free of race conditions and contributed it to the upstream open-source dependency.

Standard Chartered C++, Haskell, SQLite, Kubernetes, Ansible
Quantitative Developer

Dec 2019 — Apr 2022
London, UK

- Implementing a low-latency, high-throughput backend query engine.
- Helped the company save \$8M/year by leading and finishing successfully the development of the trading regulations component.
- Improved dev efficiency for the entire team by implementing content-addressable caching in a custom build tool.

Holmusk Haskell, Node.js, PostgreSQL, MySQL, AWS
Software Engineer

May 2018 — Nov 2019
Singapore

- Engineering backend and frontend for the Type 2 Diabetes management platform.
- Designed & implemented the entire platform for Type 2 Diabetes clinical research.
- Successfully redesigned the existing Type 2 Diabetes management platform to improve efficiency and dev velocity.

Serokell Haskell, Python
Software Engineer

May 2016 — May 2018
St. Petersburg, Russia

- Developing distributed blockchain and cryptocurrency technologies.
- Developed authorization part of a cryptocurrency to ensure a smooth launch.
- Created the company website in 2 days after a consultant spent 3 months on it.

Yandex Java
Metrics Intern

Feb 2016 — May 2016
St. Petersburg, Russia

JetBrains Kotlin
Kotlin Compiler Intern

Jul 2015 — Sep 2015
St. Petersburg, Russia

Achievements

- Popular X account with **70K+ followers**, highly-engaged in C++ and tech trends discussions.
- Gave **12 talks** at various tech conferences and meet-ups.
- Solved a **highly ambiguous** problem "Paid subscriptions don't work for some people" in a complex project
- Created a Haskell course officially acknowledged by Haskell.org, with **45K+ views** on YouTube
- Successfully finished rewrite of **300K+ LOC** Node.js project to Haskell with zero bugs in production

Education

ITMO University
Bachelor in Computer Science & Applied Math

2011 — 2015
St. Petersburg, Russia
