PROFESSIONAL EXPERIENCE

Bloomberg | Senior Software Engineer

London, UK

May 2023 – Present

1 team – Delivered cross-team impact in Real-time Market Data Feeds

2 team – Cross-Asset Derivatives Lifecycle

Stack: C++, Python, TypeScript, OCaml, Kafka, Kubernetes, SQL

Key achievements:

- Enabled ingestion of real-time data from the biggest European exchanges to Bloomberg, delivering real-time market data to clients worldwide, supporting processing of 400B+ ticks per day
- Engaged closely with clients to understand their needs and bring millions of USD of revenue to the company
- Created the Functional Programming in OCaml course from scratch, teaching it in London and New York in-person to grow the OCaml community and establish company-wide best coding practices

Feeld | Senior Software Engineer

London, UK

Apr 2022 – Apr 2023

Architecting & engineering a scalable backend for a popular dating app

Stack: CoffeeScript, Python, Haskell, MongoDB, RabbitMQ, PostgreSQL, GCP

Key achievements:

- Fixed multi-year problems for paid users which increased the company's revenue and helped the CX team be more efficient
- Created an error-monitoring dashboard using MongoDB, PostgreSQL, BigQuery, and Excel which helped drive product development priorities
- Implemented rate-limiting component free of race conditions and contributed it the upstream open-source dependency

Standard Chartered | Quantitative Developer

London, UK

Dec 2019 – Apr 2022

Implementing a low-latency, high-throughput backend query engine

Stack: C++, Haskell, SQLite, Kubernetes, Ansible

Key achievements:

- Helped the company save \$8M/year by leading and finishing successfully the development of the trading regulations component
- Improved dev efficiency for the entire team by implementing content-addressable caching in a custom build tool

Holmusk | Software Engineer

Singapore

May 2018 – Nov 2019

Engineering backend and frontend for the Type 2 Diabetes management platform

Stack: Haskell, Node.js, PostgreSQL, MySQL, AWS

Key achievements:

- Designed & implemented the entire platform for Type 2 Diabetes clinical research
- Successfully redesigned architecture and the implementation of the existing Type 2 Diabetes management platform to improve efficiency and dev velocity

Serokell | Software Engineer

St. Petersburg, Russia

May 2016 – May 2018

Developing distributed blockchain and cryptocurrency technologies

Stack: Haskell, Python

Key achievements:

- Developed authorization part of a cryptocurrency to ensure a smooth launch
- Created the company website in 2 days after a consultant spent 3 months on it

OTHERS

Yandex | Java Intern

St. Petersburg, Russia

Feb 2016 – May 2016

JetBrains | Kotlin Intern

St. Petersburg, Russia

Jul 2015 – Sep 2015

CONTACTS

London, UK

ACHIEVEMENTS

- Gave 12 talks at various tech conferences and meet-ups
- Popular X account with 60K+ followers, highly-engaged in C++ and tech trends discussions
- Solved the high-level problem "Paid subscriptions don't work for some people" in a project with multiple constraints: microservices, lack of docs, unknown languages, non-reproducible errors
- Mentored a GSoC student on implementing a backend in Haskell & PostgreSQL
- Created a Haskell course for beginners, officially acknowledged by Haskell.org, with 45K+ views on YouTube and dozens of people finished successfully
- Successfully finished rewrite of 300K LOC Node.js project to Haskell with zero bugs on the first production release and sustained its healthy work

EDUCATION

2011 – 2015

- ITMO University, St. Petersburg
Bachelor in Computer Science & Applied Math
